OBSERVATION 5

The plant is not constructed in such a manner as to allow ceilings to be kept in good repair.

Specifically, on 1/10/09 there were open gaps observed as large as 1/2" x 2 1/2 feet at the air conditioner intakes located in the roof of the firm. Water stains were also observed on the ceiling around the air conditioner intakes. Additionally, there were water stains and streaks located on the edges of the skylights where rain water has been leaking into the firm. All of these openings were located in the production/packaging room, Totes of finished, roasted product and a roasted nut packaging line are located directly underneath these areas.

OBSERVATION 6

The design of equipment and utensils fails to preclude the adulteration of food with contaminants.
